

## **Managing Software Development Team Assessment-II Report**

**Name:** Atindra Mardikar  
**Project:** DoT  
**Group:** 6

**Team Members:** Shreysa Sharma  
Sneha Lakshmisha  
Vikram Dhammi

Our Team is assigned to the Massachusetts State Department of Transportation project and we had our first meeting with the client to get insight of the project. We got to know about the system, the technologies to be used and the users.

The project involves working with numerous technologies such as .NET, C#, SQL Server HTML/CSS which at first felt challenging. But the experience we have in our team working in different technologies could prove vital.

Shreysa and Vikram have worked with .NET and C# during their work experience, while Sneha and I have experience working in HTML/CSS. But we are not aware of few technologies involved with the project and that could be a challenge for all of us but we have discussed about these technological skills and we all will put in our best efforts to learn them. Also the project would follow Scrum model with every sprint lasting 1 to 4 weeks. Sneha have worked in a scrum environment before and is aware with all the terms and procedures. Shreysa, Vikram and I have no experience in working in such environment but David (Client) assured that we would get along as we proceed with the project.

The client also told us about the team members from DoT which are involved in the project and discussed our roles within the team. The DoT team members are experts and experienced people who will help us with our project and we will surely learn from them.

To sum up, we all have few shortcomings with the technologies and the procedures followed at the DoT but the team members could help each other to learn and thus giving our best to complete the project successfully.
